Description

I am logged in as an employee, I enter an expense report with a receipt that has an extension other than jpg, jpeg or png, I send. I arrive on the Bills page, I click on the "view" icon to consult the receipt: the modal opens, but there is no image.

If I now log in as an Admin, and click on the corresponding ticket, the file name displayed is null. Similarly, when I click on the "view" icon to view the receipt: the modal opens, but there is no image

Todo

The modal should display the image

In the Dashboard, the form corresponding to the ticket must display the file name.

Suggestion: prevent the input of a document with an extension other than jpg, jpeg or png in the form of the NewBills.js file.

Hint: this happens in the method handleChangeFile...
